

Lab 11 – Web Scraping

24 April, 2019

Web Scraping

1. Write a program which:
 - Asks the user for a search term
 - Asks the user for the number of results to return
 - Performs a Google Image search
 - Displays the first n results in different browser windows
 - Downloads the first n images to the local disk

2. Write a program which will:
 - Ask the user for the URL for a web page
 - Open the web page in the browser
 - Validate that every link on that page can access a valid website
 - For website which do not work, report the URL and the error to the user
